About Me

Passionate about forward-looking challenges, I am currently working as a web3 Developer, a new technology that fits perfectly with my usual priorities: Security, Resilience and Customer Oriented.

Work Experience

CTO and Co-Founder. September 2021 to Present
Draft Digital is a project rather than a company. We are committed to transforming the entire web2 into a fully decentralized web3 ecosystem.

- Draft Digital designs and builds the core infrastructure for the decentralized web. We provide a full suite of expert services to take your decentralized system from idea to production.
- Critical vulnerabilities in Solidity code can be costly after launch. We audit your smart contract code in the early stages of development to avoid catastrophic errors. Each audit combines automated scans with line-by-line dual review.

Business Continuity and IT Security Account Lead. April 2017 to December 2020
DXC Technology

- Responsible for the analysis, setup and implementation BCP and Disaster Recovery projects and co-ordinate and solve crisis management and business interruption situations.
